

WHAT IF IT'S ALL INFORMATION?

An independent theory proposing that information is what reality is made of, and that one process runs from before spacetime to the mind reading this.

THE ORIGIN SEQUENCE · OPEN QUESTIONS AND WHAT THE FRAMEWORK PROPOSES

- 1 **PRE-GEOMETRIC SUBSTRATE**

OPEN What came before $t = 0$? · What are objects made of?

A prior state, outside space and time. Relationships come first; objects are patterns in them.
- 2 **PLANCK CRYSTALLIZATION**

OPEN Inflation needs its own result · Vacuum energy 120 orders off

Spacetime crystallizes out of the substrate. Expansion continues it, so dark energy should evolve.
- 3 **SPACETIME EMERGES**

OPEN Why isn't the sky the same every way? · Gravity vs quantum

Uneven crystallization leaves a direction in the sky. Gravity and quantum theory are two limits of one substrate.
- 4 **QUANTUM FIELDS**

OPEN Where is the observer in the equations?

Measurement is information exchange. The observer is inside physics.
- 5 **PARTICLES & FORCES**

OPEN Why do the constants have these values?

They are what stable information processing requires.
- 6 **STARS & RENEWAL**

OPEN Infinite density at zero volume?

No singularities. Black holes keep information and recycle structure.
- 7 **CONSCIOUSNESS**

OPEN Why is the scientist outside the theory?

We are the universe examining itself, locally.

PUT TO THE TEST. DATED IN ADVANCE.

COSMIC-005 · DARK ENERGY

DARK ENERGY KEEPS EVOLVING

Decided by DESI's third data release · 2027

Pre-registered 12 Sept 2026 · doi.org/10.5281/zenodo.22719514

COSMIC-007 · LARGE-SCALE STRUCTURE

THE SKY HAS A DIRECTION

Decided by Rubin's first data release · mid-2028

Pre-registered 12 Sept 2026 · doi.org/10.5281/zenodo.22720954

Consistent so far, but recorded after the data, so not counted as predictions: DESI dark energy (2024–25) · Google Willow error correction (2024) · JWST early galaxies (2024–25) · ALMA hot cluster gas (2026).
