

WHAT IF IT'S ALL INFORMATION?

An independent theory proposing that information is what reality is made of, and that one process runs from before spacetime to the mind reading this.

WHAT PHYSICS LEAVES OPEN

What came before $t = 0$? 07
What are objects made of? 01

Inflation needs the spacetime it creates. 04
Why is the vacuum energy 120 orders off? 08

Why isn't the sky the same in every direction? 09
Why won't gravity and quantum theory fit? 05

Where is the observer in the equations? 02

Why do the constants have these values? 03

Infinite density at zero volume? 06

Why is the scientist outside the theory? 10

WHAT THE FRAMEWORK PROPOSES

PRE-GEOMETRIC SUBSTRATE

A prior state, outside space and time. Relationships come first; objects are patterns in them.

PLANCK CRYSTALLIZATION

Spacetime crystallizes out of the substrate. Expansion is that process continuing, so dark energy should evolve.

SPACETIME EMERGES

Uneven crystallization leaves a direction in the sky. Gravity and quantum theory are two limits of one substrate.

QUANTUM FIELDS

Measurement is information exchange. The observer is inside physics, not outside it.

PARTICLES & FORCES

They are what stable information processing requires.

STARS & RENEWAL

No singularities. Black holes keep information and recycle structure.

CONSCIOUSNESS

We are the universe examining itself, locally.

PUT TO THE TEST. DATED IN ADVANCE.

COSMIC-005 · DARK ENERGY

DARK ENERGY KEEPS EVOLVING

Decided by DESI's third data release · 2027

Pre-registered 12 Sept 2026 · doi.org/10.5281/zenodo.22719514

COSMIC-007 · LARGE-SCALE STRUCTURE

THE SKY HAS A DIRECTION

Decided by Rubin's first data release · mid-2028

Pre-registered 12 Sept 2026 · doi.org/10.5281/zenodo.22720954

Consistent so far, but recorded after the data, so not counted as predictions: DESI dark energy (2024–25) · Google Willow error correction (2024) · JWST early galaxies (2024–25) · ALMA hot cluster gas (2026).
